

Missouri Weekly Influenza Surveillance Report 2019-2020 Influenza Season¹

Week 51: December 15, 2019 – December 21, 2019

All data are preliminary and may change as more reports are received.

Summary:

- The estimated influenza activity in Missouri is Regional².
- A total of 775 laboratory-positive³ influenza cases (234 influenza A, 537 influenza B, and 4 untyped) were reported during Week 51. The season-to-date total of laboratory-positive influenza cases is 4,299 (38.2% influenza A, 60.7% influenza B, and 1.1% untyped). Two laboratory-positive cases of influenza (AH1N1) were reported by the Missouri State Public Health Laboratory (MSPHL) during Week 51. The percentage of respiratory specimens testing positive for influenza in Missouri laboratories reporting to the National Respiratory and Enteric Virus Surveillance System (NREVSS) decreased during Week 51 (Figure 6).
- Influenza-like illness (ILI) activity was above baseline for the Missouri Outpatient ILI Surveillance Network (ILINet) and for the hospital emergency room visit chief complaint data reported through ESSENCE. The reported percentage of visits for ILI was 3.08% (Figure 5) and 3.96% (Figure 7) through ILINet and ESSENCE respectively.⁴ The ILI data from a small number of sites located in the Northwest Region of the state is currently unavailable in ESSENCE. Therefore, the ILI data for the Northwest Region should be interpreted with caution.
- Seven influenza-associated deaths have been reported in Missouri as of Week 51.⁵ During Week 50, 15 deaths involving Pneumonia and Influenza (P&I) were reported to the Bureau of Vital Records, resulting in a season-to-date total of 415 P&I associated deaths in Missouri.⁶
- No influenza or ILI-associated outbreaks or school closures have been reported in Missouri as of Week 51.
- Seasonal influenza activity in the United States has been elevated for six weeks and continued to increase during Week 50. National influenza surveillance information is prepared by CDC and is included in the weekly FluView report, which is available online at <http://www.cdc.gov/flu/weekly/fluactivitysurv.htm>.

¹The 2019-2020 influenza season begins CDC Week 40 (week ending October 5, 2019) and ends CDC Week 39 (week ending September 26, 2020).

²Regional is defined as: Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions.

³Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

⁴Influenza-like illness (ILI) is defined by ILINet as fever (temperature of 100°F [37.8°C] or greater) and a cough and/or a sore throat without a known cause other than influenza. ILI is defined by ESSENCE as Emergency Department chief complaints for Influenza or (FeverPlus and (Cough or SoreThroat) and not NonILIFevers).

⁵All influenza-associated deaths became reportable in Missouri in 2016.

⁶The P&I data are available one week later. The P&I data for the CDC Week provided is the most current data available.

Data Figures

Figure 1. Number of Laboratory-positive[†] Influenza Cases by Influenza Type, Missouri, CDC Week 51 (December 15, 2019 – December 21, 2019)*

Influenza Type	Week 49	Week 50	Week 51	2019-2020* Season-to-Date
Influenza A	243	330	234	1,641
Influenza B	407	751	537	2,611
Influenza Unknown Or Untyped	6	28	4	47
Total	656	1,109	775	4,299

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*Influenza season begins week ending October 5, 2019 (CDC Week 40) Data Source: Missouri Health Information Surveillance System (WebSurv).

Figure 2. Number of Laboratory-positive[†] Influenza Cases and Case Rates by Age Group, Missouri, CDC Week 51 (December 15, 2019 – December 21, 2019)*[‡]

Age Group	Week 51 Cases	Week 51 Rate [‡]	2019-2020* Season-to-Date	2019-2020* Season-to-Date Rate [‡]
00-04	139	37.13	759	202.75
05-24	391	24.37	1,853	115.49
25-49	157	8.20	968	50.59
50-64	56	4.53	423	34.21
65+	32	3.35	296	31.00
Total	775	12.74	4,299	70.66

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*Influenza season begins week ending October 5, 2019 (CDC Week 40) Data Source: Missouri Health Information Surveillance System (WebSurv)

[‡]Incidence Rate per 100,000 population

Figure 3. Number of Laboratory-positive[†] Influenza Cases and Case Rates by Region, Missouri, CDC Week 51 (December 15, 2019 – December 21, 2019)^{‡*}

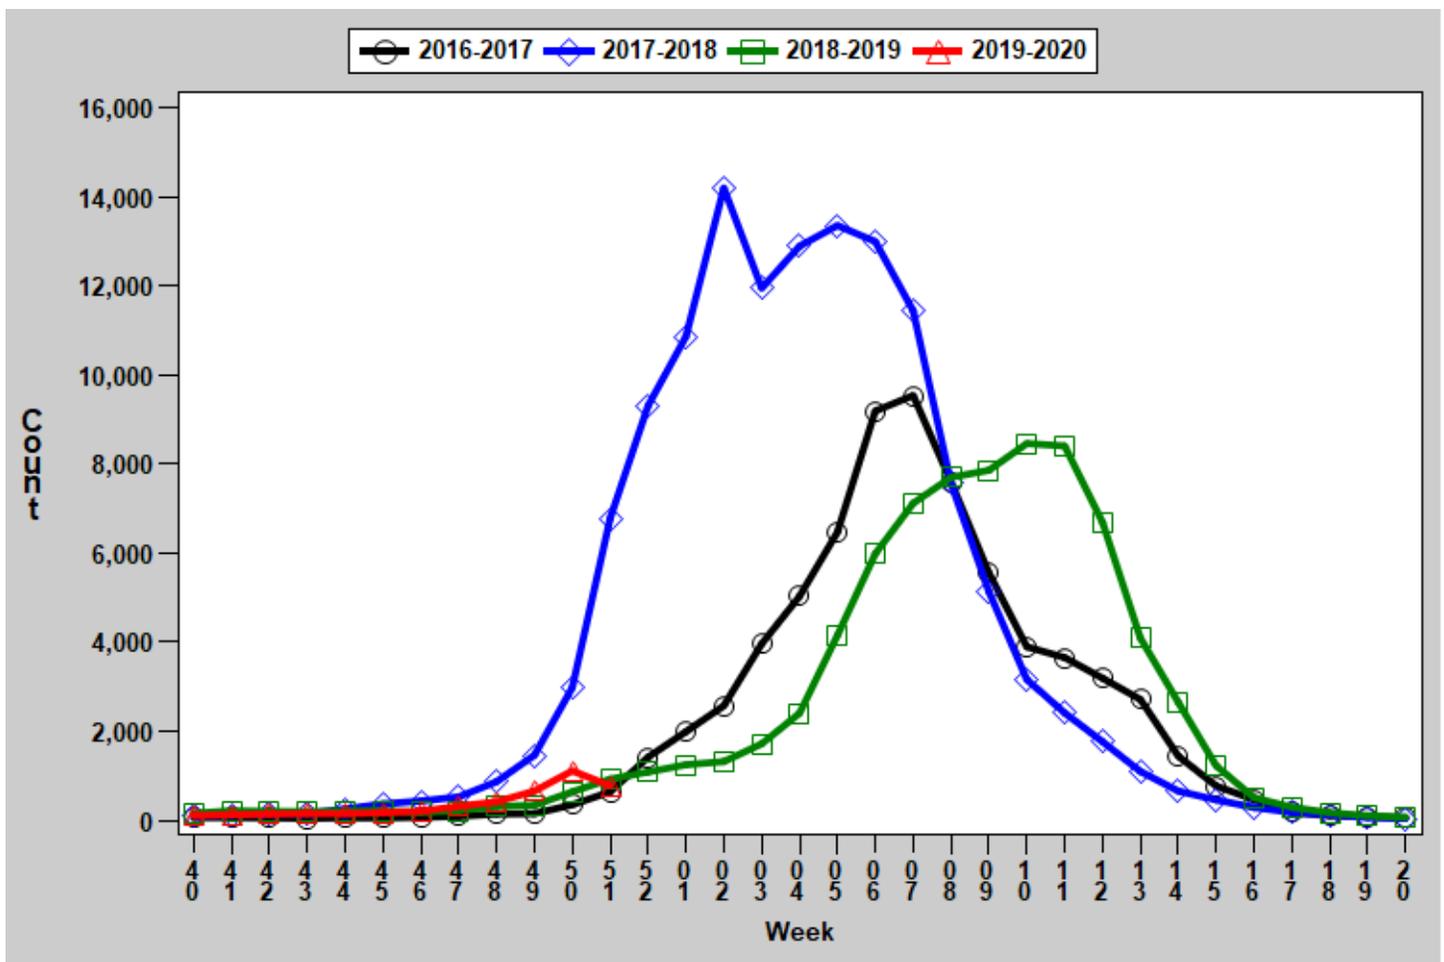

Region	Week 51 Cases	Week 51 Rate [‡]	2019-2020* Season-to-Date	2019-2020* Season-to-Date Rate [‡]
Central	189	27.92	658	97.19
Eastern	111	4.90	813	35.88
Northwest	301	18.84	1,791	112.11
Southeast	100	21.20	529	112.15
Southwest	74	6.91	508	47.42
Total	775	12.74	4,299	70.66

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*Influenza season begins week ending October 5, 2019 (CDC Week 40) Data Source: Missouri Health Information Surveillance System (WebSurv)

[‡]Incidence Rate per 100,000 population

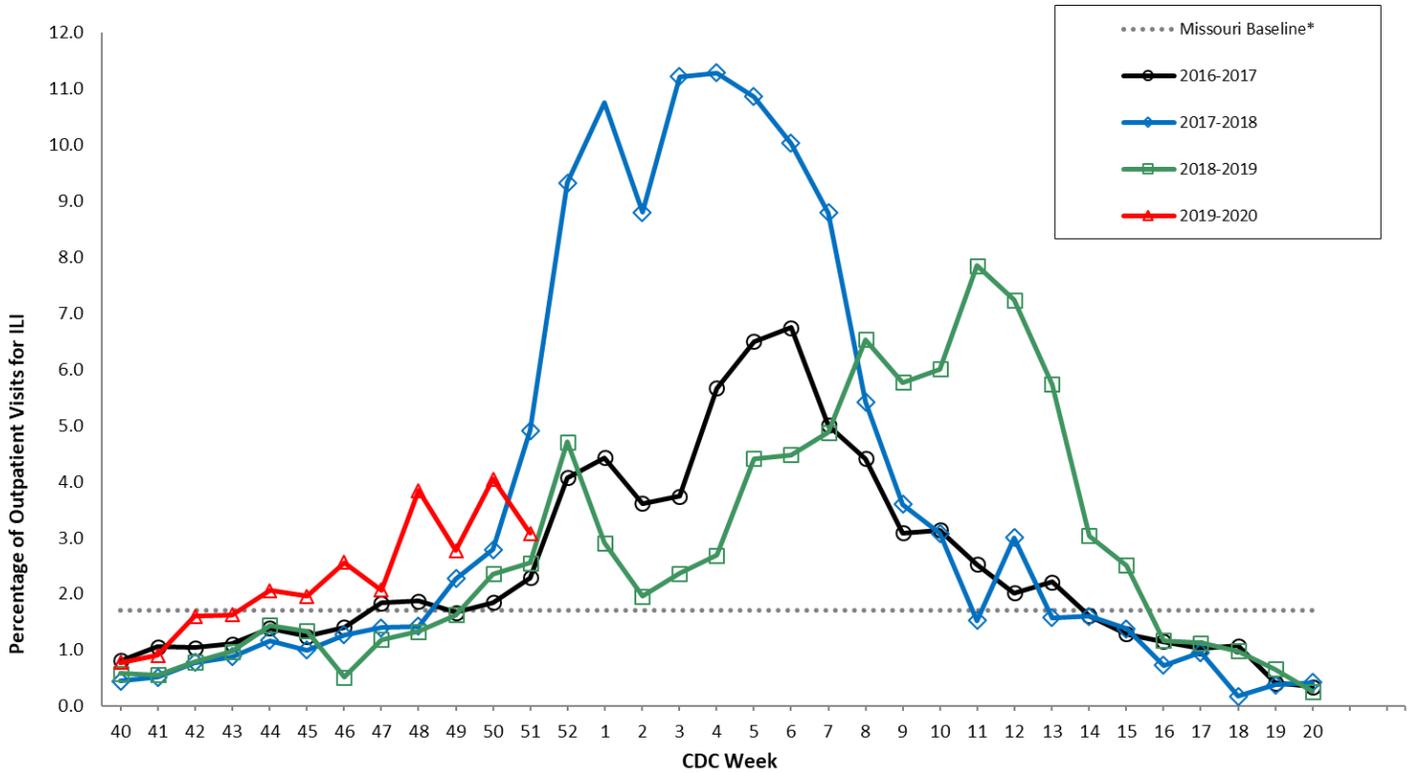

Figure 4. Number of Laboratory-positive[†] Influenza Cases by CDC Week, Missouri, 2016-2020*

[†]Laboratory-positive influenza includes the following test methods: rapid influenza diagnostic tests (antigen), reverse transcriptase polymerase chain reaction (RT-PCR) and other molecular assays, immunofluorescence antibody staining (Direct (DFA) or Indirect (IFA)), or viral culture.

*2019-2020 season-to-date through the week ending May 16, 2020 (Week 20).Data Source: Missouri Health Information Surveillance System (WebSurv).

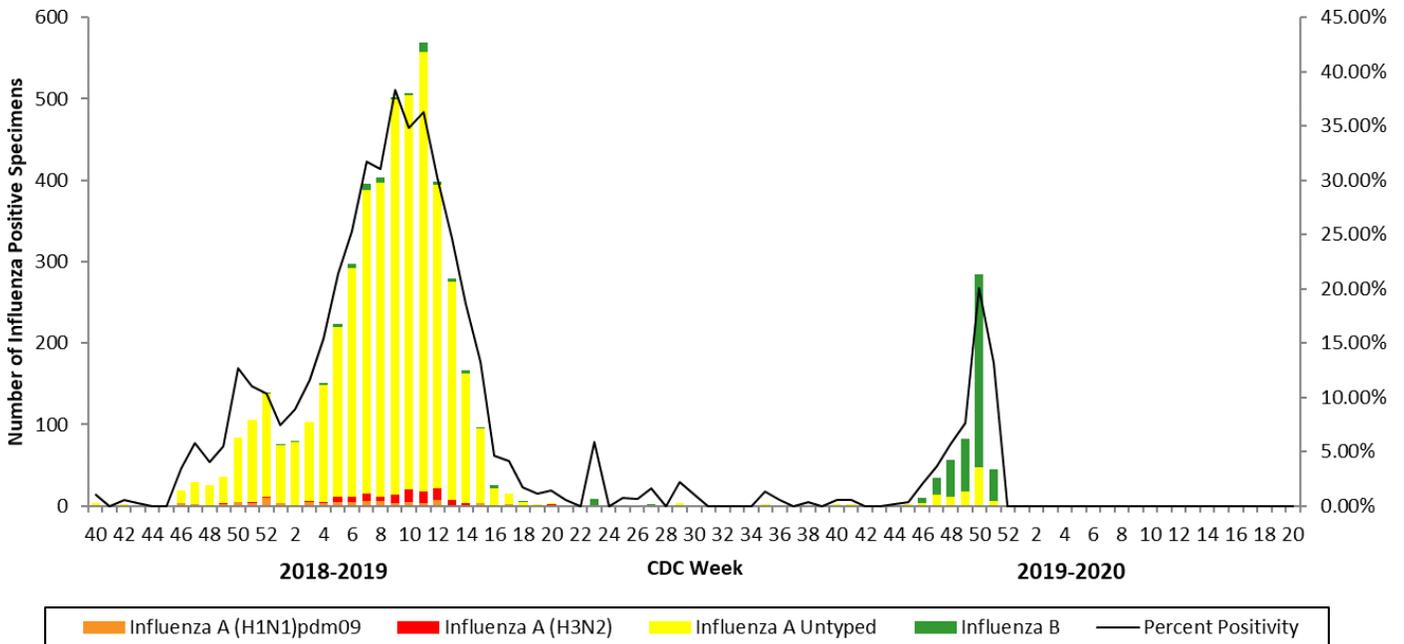

Figure 5. Percentage of Outpatient Visits for Influenza-like Illness (ILI), Missouri Outpatient ILI Surveillance Network (ILINet) 2016-2020*†

*The ILINet Region 7 (MO, IA, KS, NE) baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons, plus two standard deviations. A non-influenza week is defined as periods of two or more consecutive weeks in which each week accounted for less than 2% of the season's total number of specimens that tested positive for influenza. Data Source: U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), Centers for Disease Control and Prevention (CDC).

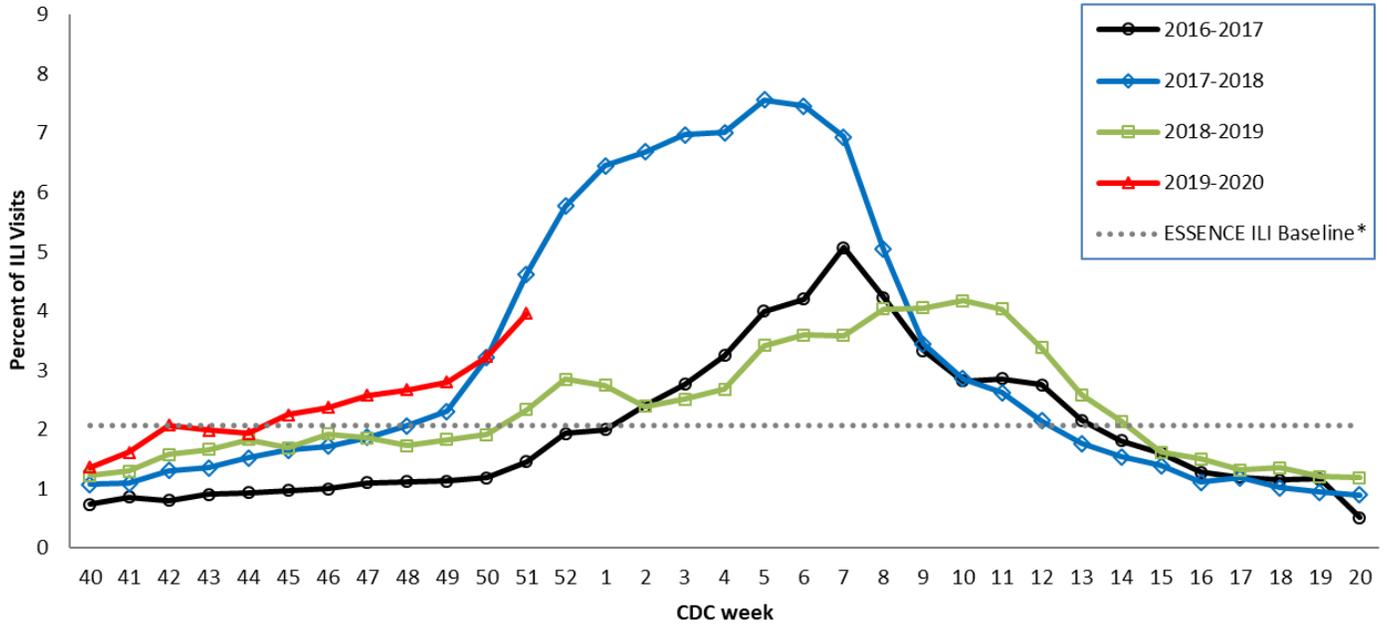

†2019-2020 season-to-date through the week ending May 16, 2020 (Week 20).
